FCC STATEMENT
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

CE MARKING
This equipment complies with the essential requirements of the relevant European health, safety and environmental protection legislation.

WEEE MARKING
Waste Electrical and Electronic Equipment (WEEE), Directive 2002/96/EC
(This directive is only valid in the EU.)
This equipment complies with the WEEE Directive (2002/96/EC) marking requirement. The left marking indicates that you must not discard this electrical/electronic equipment in domestic household waste.
## Safety Instructions

Read and understand all safety and operating instructions before using this product. Follow all instructions and heed all warnings/cautions.

### Warning

#### For lifting heavy products:

<table>
<thead>
<tr>
<th>Note</th>
<th>Instruction</th>
</tr>
</thead>
</table>
| ![Warning icon] | Lifting must be done by two or more personnel.  
To avoid injury: When lifting the product, bend your knees, keep your back straight and get close to it with two or more persons. |

#### For installing and connecting products:

<table>
<thead>
<tr>
<th>Note</th>
<th>Instruction</th>
</tr>
</thead>
</table>
| ![Prohibited icon] | Do not place the product upon a surface that may give way or that may become unstable.  
Install the product in a secure and stable place to prevent it from falling and possibly causing injury.  
Secure the product if installing in locations prone to vibration or movement.  
Otherwise, it may move unexpectedly or it may fall and lead to injury. |
| ![Warning icon] | Installation work must be performed by professionals.  
The product is intended to be installed by skilled technicians. For installation, please contact a system integrator or IDK. Improper installation may lead to the risk of fire, electric shock, injury, or property damage.  
Insert the power plug into an outlet that is unobstructed.  
Unobstructed access to the plug enables unplugging the product in case of any extraordinary failure, abnormal situation or for easy disconnection during extended periods of non-use.  
Insert the power plug into an appropriate outlet completely.  
If the plug is partially inserted, arching may cause the connection to overheat, increasing the risk of electrical shock or fire. Do not use a damaged plug or connect to a damaged outlet.  
Unplug the product from the AC power source during installation or service.  
When connecting peripheral devices to this product, unplug all involved devices from outlets. Ground potential differences may cause fire or other difficulties. |

#### For operating products:

<table>
<thead>
<tr>
<th>Note</th>
<th>Prohibited</th>
</tr>
</thead>
</table>
| ![Prohibited icon] | Do not repair, modify or disassemble.  
Since the product includes circuitry that uses potentially lethal, high voltage levels, disassembly by unauthorized personnel may lead to the risk of fire or electric shock. For internal inspection or repair, contact your IDK representative. |
| ![Warning icon] | Do not repair, modify or disassemble.  
Do not touch the product and connected cables during electrical storms.  
Contact may cause electric shock. |
| ![Instruction icon] | Clean the power plug regularly.  
If the plug is covered in dust, it may increase the risk of fire.  
The product must be earthed.  
To reduce the risk of electrical shock, ensure the product is connected to a mains socket outlet with a protective earthing connection. |

---

■ If the following problem occurs:

- **Unplug immediately if the product smokes, makes unusual noise, or produces a burning odor.**
  
  If you continue to use the product under these conditions, it may cause electric shock or fire.

- **Unplug immediately if the product is damaged by falling or having been dropped.**
  
  If you continue to use the product under these conditions, it may increase the risk of electrical shock or fire. For maintenance and repair, contact your IDK representative.

- **Unplug immediately if water or other objects are directed inside.**
  
  If you continue to use the product under these conditions, it may increase the risk of electrical shock or fire. For maintenance and repair, contact your IDK representative.

---

**Caution**

■ For installing and connecting products:

- **Do not place the product in a location where it will be subjected to high temperatures.**
  
  If the product is subjected to direct sunlight or high temperatures while under operation, it may affect the product’s performance and reliability and may increase the risk of fire.

- **Do not store or operate the product in dusty, oil smoke filled, or humid place.**
  
  If the product is placed near humidifiers or in a dusty area, it may increase the risk of fire or electric shock.

- **Do not block the vent holes.**
  
  If ventilation slots are blocked, it may cause the product to overheat, affecting performance and reliability and may increase the risk of fire.

- **Do not place or stack heavy items on the product.**
  
  Failure to observe this precaution may result in damage to the product and other property and may lead to the risk of personal injury.

- **Do not exceed ratings of outlet and wiring devices.**
  
  Exceeding the rating of an outlet may increase the risk of fire and electric shock.

- **Do not handle power plug with wet hands.**
  
  Failure to observe this precaution may increase the risk of electrical shock.

- **Use and store the product within the specified temperature/humidity range.**
  
  If the product is used outside the specified range for temperature and humidity continuously, it may increase the risk of fire or electric shock.

- **Do not place the product at elevations of 1.24 mi. (2,000 m) or higher above sea level.**
  
  Failure to do so may shorten the life of the internal parts and result in malfunctions.

- **When mounting the product into the rack, provide sufficient cooling space.**
  
  Mount the product in a rack meeting EIA standards, and maintain spaces above and below for air circulation. For your safety as required, attach an L-shaped bracket in addition to the panel mount bracket kit to improve mechanical stability.

- **Never insert screws without the rubber feet into the threaded holes on the bottom of the product.**
  
  Never insert screws without the rubber feet into the threaded holes on the bottom of the product. Doing so may lead to damage when the screws contact electrical circuitry or components inside the product. Reinstall the originally supplied rubber feet using only the originally supplied screws.
### For operating products:

### Instruction

- **If cooling fan stops, power off the product and contact us.**
  - Failure to do so may rise internal temperature and increase the risk of malfunction, fire, or electric shock.
- **Keep vents clear of dust.**
  - If the vent holes near the cooling fan or near the fan are covered with dust, internal temperature rises and it may increase the risk of malfunction. Clean the vent holes and near the fan as needed.
  - If dust accumulates inside of the product, it may increase the risk of malfunction, fire, or electric shock. Periodic internal cleaning, especially before humid rainy season, is recommended. For internal cleaning, contact your IDK representative.

1 About this Guide

This user guide explains how to use the NJR-P01UFR-R (hereafter referred to as “NJR-P”) and about external control through the IP-NINJAR Configurator and NJR-CTB. The NJR-P01UFR-R is a decoder. If other IP-NINJAR series products are connected, refer to each user guide.

2 Included Items

Ensure all items below are included in the package.
If any items are missing or damaged, please contact IDK.

Since the power cord is not included, use the power cord meeting the conditions below:
- Connector: Neutrik’s “NAC3FX-W-TOP”
- Cable and AC plug complying with the safety standard of your country

One (1) NJR-P01UFR-R

[Fig. 2.1] Included items
3 Product Outline

The NJR-P is an AV over IP decoder for long-haul HDMI signal transmission over fiber optic cables. HDMI video signals can be transmitted at resolutions up to 4K@60 (4:4:4) and supports HDCP 2.2 encryption. LAN transmission is also supported. The decoder incorporates robust Neutrik connectors and a ruggedized chassis to accommodate event/staging market needs.

The NJR-P can be combined with other IP-NINJAR series products to create a versatile 10GbE AV over IP eco-system or used with a single IP-NINJAR encoder for point-to-point video extension.

![Diagram of HDMI signals transmission](image)

**Note:**

Use the NJR-P with other IP-NINJAR series products. The NJR-P cannot be combined with IDK’s OPF or FDX series products.
4 Features

■ Video
  • Up to 4K@60 (4:4:4)
  • HDCP 1.4/2.2
  • HDR
  • Transmission distances
    - Multimode fiber (OM3) : Up to 984 ft. (300 m)
    - Singlemode fiber (OS1) : Up to 6.21 mi. (10 km) (Up to 24.85 mi. (40 km, optional))

■ Communication
  • LAN

■ Network
  • 10 Gb switch allows; extension, distribution, matrix switching, videowall, and multiview
  • Controllable through network using NJR-CTB
  • IP-NINJAR encoders and decoders can easily be added and replaced

■ Others
  • DDC buffer
  • Connection Reset
  • Neutrik’s robust connector with locking mechanism and rugged and lightweight chassis
  • Fanless (No fan noise)

6 System Configuration Example

This chapter cites two system configuration examples.

6.1 Used as Network Extender

Using the NJR-P and other IP-NINJAR encoders/decoders with a 10GbE switch enables extending, distributing, matrix switching, videowall, and multiview.

① Video and audio signals are input from the Blu-ray player to the HDMI input connector of NJR-P01UF-T/NJR-T04HD.
② NJR-P01UF-T/NJR-T04HD outputs these signals over a fiber optic cable.
③ 10GbE switch sends video and audio signals to the NJR-P01UFR/NJR-R04HD according to the setting of NJR-CTB.
④ NJR-P01UFR/NJR-R04HD outputs received video and audio signals from the HDMI output connector to the monitor.

[Fig. 6.1] Used as Network extender
6.2 Used as Extender

The NJR-P and other IP-NINJAR encoders are connected as point-to-point.

① Video and audio signals are input from the Blu-ray player to the HDMI input connector of NJR-P01UF-T/ NJR-T04HD.
② NJR-P01UF-T/NJR-T04HD outputs these signals to NJR-P01UFR-R over a fiber optic cable.
③ NJR-P01UFR-R outputs received video and audio signals from the HDMI output connector to the monitor.
④ NJR-P01UF-T/NJR-T04HD/NJR-P01UFR-R enables LAN communication for peripheral device control (such as projectors).

Using NJR-P01UF-T and NJR-P01UFR-R

Multiview using NJR-T04HD and NJR-P01UFR-R
7 Precautions

Before using NJR-P, follow the precautions and instructions below.

7.1 Installation

When installing the NJR-P, please observe the following precautions; otherwise, the internal temperature increases and it may affect the product lifetime and operation.

- Do not stack or place one NJR-P directly on top of another NJR-P.
- Do not block vent holes.
- To provide adequate ventilation, maintain sufficient clearances around the NJR-P (1.2 in. (30 mm) or more).
- Consider installing the NJR-P in an environment compatible with the maximum temperature indicated in the specification sheet 32°F to 104°F (0°C to +40°C).

Tip:
For installing the NJR-P in an EIA rack, we offer optional rack mounting hardware. Please contact us as needed.

- Attaching truss bracket and the like (e.g. For event/staging)

Attach a truss bracket. Please prepare the truss bracket and its bolts (Not included in the NJR-P).

[Fig. 7.1] Removing original bolts
Attaching rack mounting hardware (RM-SF)

1. Remove the bottom plate by unscrewing five (5) original screws from the bottom plate of the NJR-P.

2. Mount the NJR-P on the rack shelf and secure the device using the provided screws. The appropriate screw tightening torque: 0.59 N·m (6.1 kgf·cm, approx.)

[Fig. 7.2] Attaching RM-SF
7.2 Cabling

When connecting the NJR-P to external devices, please observe the following precautions.

- Read manuals for the external devices.
- Before connecting cables to the NJR-P or an external device, dissipate static electricity by touching grounded metal such as equipment racks before handling signal cables. Failure to observe this precaution may result in ESD (electrostatic discharge) damage.
- Power all units off before connecting cables.
- Be sure to fully seat all plugs and connections and dress cables to reduce stress on connectors.

7.2.1 HDMI cable

When the video is 4K format, the maximum TMDS data rate (transmission speed) is 18 Gbps. If a high-speed HDMI cable is used, the maximum TMDS data rate of 10.2 Gbps can be transferred, and the video cannot be displayed stably.

Please select an 18 Gbps high-speed cable depending on the 4K format. The maximum transmission distance depends on the cable type, source and sink devices. You are recommended to use high quality cables.

**[Table 7.1] 18 Gbps high-speed cable for 4K format**

</tr>
</tbody>
</table>

18 Gbps: 18 Gbps high-speed cable, 10.2 Gbps: 10.2 Gbps transmission cable, -:N/A

**Note:**
If a cable joint (JJ) or the like is used to extend the distance, the video may not be displayed correctly.
7.2.2 Fiber optic cable for extension

The NJR-P can reach their full potential by selecting appropriate fiber optic cables for long-haul extension and installing the cable correctly.

Connect the output connector of this device to the input connector of the target device. Connect the input connector of this device to the output connector of the target device. The target device should be an IP-NINJAR fiber model encoder or 10GbE switch.

[Fig. 7.3] Connecting fiber optic cable

Note:
For the connectors of 10GbE switch, refer to the switch’s manual.
- To polish connectors:
  For SFP+ optical transceiver for multimode: PC polishing is recommended.
  For SFP+ optical transceiver for singlemode: UPC polishing is recommended.
  **Note:** APC polishing is not supported.
- Transmission distance varies depending on attenuation of the fiber, connector and other contact portions.
- Make sure not to exceed the allowable tension and bend radius of fiber optic cable or the performance of the product and the life of the fiber optic cable may be affected.
- Plug the dust caps to both faces of the fiber optic cable when connecting the fiber optic cable and when not in use.
- Before inserting a fiber optic cable, make sure there is no damage or dirt on the end-face of the optical connector. Clean up it or NJR-P may not operate correctly.

![Left: without dust cap Right: with dust cap](image)

**Fig. 7.4** Dust caps

</tbody>
</table>

**[Fig. 7.6] LAN connector**

Make sure not to form a loop by NJR-P when connecting a LAN cable to NJR-P.

NJR-P constantly send broadcast packet in order to notify status.

If adding the LAN cable to the existing network, avoid problems, such as broadcast storm caused by broadcast traffic.

Broadcast storm: This problem occurs when a network system is overwhelmed by continuous broadcast traffic or the like.
8 Basic Operation

The NJR-P can be set from NJR-CTB or IP-NINJAR Configurator over LAN communication.

[Fig. 8.1] Setting NJR-P
8.1 Controlled by IP-NINJAR Configurator

The NJR-P connected to LAN can be set from the IP-NINJAR Configurator remotely over LAN communication.

The following settings can be set from the GUI: selecting output audio, setting LAN, resetting settings, and rebooting NJR-P. For other settings, communication commands can be input from the command line.

Refer to the IP-NINJAR Configurator user guide for operations from the IP-NINJAR Configurator.

Refer to the command guide for NJR-P for details of communication commands.

Please contact us to download the IP-NINJAR Configurator.
8.2 Controlled by NJR-CTB

The NJR-CTB is the integrated control unit for IP-NINJARs connected to a network over a 10GbE switch. The control box can control all devices and acquire their statuses using communication commands over WEB browser or LAN by connecting to IP-NINJAR products or 10GbE switch.

Refer to NJR-CTB user guide for operations over a web browser.
Refer to the command guide for NJR-P or the command guide for NJR-CTB for details of communication commands.

*1 The LAN connector of NJR-CTB should be connected to the LAN connector of NJR-P or the 10GbE switch.
*2 PC for control should be connected to the MAINTENANCE connector of NJR-CTB or the LAN connector of NJR-P.

[Fig. 8.4] Controlled by NJR-CTB
8.3 Setting Items

Some setting items can be controlled over commands/GUI operation; the others cannot be controlled.

*: In this manual, only settings of NJR-P are explained. Refer to NJR-CTB user guide for the following operations: Using as Network Extender base on 10GbE Switcher, setting channel information, selecting input/output channel, operating preset memory, setting videowall, and setting NJR-CTB LAN.
8.4 Initialization

You can initialize settings to factory defaults using IP-NINJAR Configurator or NJR-CTB over LAN communication.
When initialization completes, NJR-P reboots with new settings automatically.

Note:
Once values are initialized, they cannot be restored.

See: 8.1 Controlled by IP-NINJAR Configurator
See: 8.2 Controlled by NJR-CTB

8.5 Reboot

You can reboot NJR-P using IP-NINJAR Configurator or NJR-CTB over LAN communication.

See: 8.1 Controlled by IP-NINJAR Configurator
See: 8.2 Controlled by NJR-CTB
The following items of NJR-P can be set using the IP-NINJAR Configurator, or NJR-CTB.

In this manual, only settings of NJR-P are explained. Refer to NJR-CTB user guide for the following operations: Using as Network Extender base on 10GbE Switcher, setting channel information, selecting input/output channel, operating preset memory, setting videowall, and setting NJR-CTB LAN.

9.1 Output

9.1.1 Output mode

You can set the color space to be sent to the sink device. The sink device selects the best color space for the color space of the input video automatically, but if for some reason the sink device cannot select the color space, set the desired color space.

Setting value
- AUTO [Default]
- DVI output
- RGB output
- YCbCr 4:2:2 output
- YCbCr 4:4:4 output
- YCbCr 4:2:0 output

Note:
This setting is enabled when HDMI signal is input.

9.1.2 HDCP output

You can set the HDCP output for when a HDCP-compliant device is connected. Normally select “ALWAYS” to output HDCP at all times regardless of input signal status.

If you select “HDCP INPUT ONLY”, HDCP will be output only if the input signal has HDCP. However, some sink devices fail HDCP authentication when HDCP is switched from OFF to ON; this results in that video and audio may not be output temporarily.

Setting value
- ALWAYS [Default]
- HDCP INPUT ONLY
- HDCP 2.2
9.1.3 Hot plug ignoring duration

Time for ignoring the video output request signals sent from the sink device. If the request signals are repeated in a short cycle, the NJR-P processes video output from the first cycle. As a result, video may not be output. This problem can be solved by setting the ignoring time.

**[Fig. 9.1] Hot plug mask**

**Setting value**
- OFF (Not ignoring request signals) [Default]
- 2 to 15 [sec.]
9.2 Audio

9.2.1 Muting digital audio

You can enable or disable the audio output mute. Output audio from the HDMI output connector is muted.

**Setting value**
- Mute OFF [Default]
- Mute ON

9.2.2 Selecting output audio

You can select analog or digital audio that is embedded to output video. Commands for analog input audio can be used when using the NJR-P with other IP-NINJAR encoders.

**Setting value**
- Analog input audio
- Digital input audio [Default]
9.3 LAN

9.3.1 LAN

The IP address can be obtained automatically by DHCP (Dynamic Host Configuration Protocol). Static IP address, subnet mask, and default gateway can also be configured manually.

Setting value

[Table 9.2] LAN setting items

<table>
<thead>
<tr>
<th>Setting item</th>
<th>Setting value</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP address</td>
<td>0.0.0.0 to 255.255.255.255</td>

## 10 Product specification

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Input**             | 1 input  
Digital signal for extension  
Format: IP-NINJAR protocol  
LAN  
Connector: 2 Neutrik’s LC (opticalCON DUO series) |
| **Output**            | 1 output  
HDMI/DVI 1.0  
TMDS single link, HDCP 1.4/2.2  
HDR (*1)  
x.v.Color/3D/ARC/HEC/CEC are not supported.  
Connector: 1 female HDMI Type A (19-pin) |
| **Format**            | VGA / SVGA / XGA / WXGA (1280x768) / WXGA (1280x800) / Quad-VGA / SXGA / WXGA (1360x768) / WXGA (1366x768) / WXGA (2048x1152) / 
WXGA (2048x1536) / SXGA+ / UXGA / WSXGA+ / VESAHD / WUXGA / QWXGA / 4K  
480i / 480p / 576i / 576p / 720p / 1080i / 1080p / 4K  
For 4K formats, 24 Hz/25 Hz/30 Hz/50 Hz (4:4:4)/60 Hz (4:4:4) are supported. |
| **Color depth**       | 24 bit, 30 bit, 36 bit Deep Color  
For 4K formats, only 24 bit is supported. |
| **Dot clock**         | 25 MHz to 600 MHz |
| **TMDS clock**        | 25 MHz to 300 MHz |
| **TMDS data rate**    | 0.75 Gbps to 18 Gbps |
| **Digital audio output** | Multi-channel LPCM up to 8 channels  
Sampling frequency: 32 kHz to 192 kHz  
Sample size: 16 bit to 24 bit |
| **Cable for extension** | Polishing  
SFP+ optical transceiver for Multimode: PC polishing  (Recommended)  
SFP+ optical transceiver for Singlemode: UPC polishing  (Recommended), SPC  
*APC is not supported.  
Transmission distances (*3)  
Multimode fiber (OM3): Up to 984 ft. (300 m)  
Singlemode fiber (OS1): Up to 6.21 mi.  (10 km)  
Singlemode fiber (OS1): Up to 24.85 mi.  (40 km, optional) |
| **Control**           | LAN  
1 port/Neutrik’s RJ-45 (etherCON type)  
10Base-T/100Base-TX/1000Base-T (Auto Negotiation), Auto MDI/MDI-X |
| **Functions**         | DDC buffer, Connection Reset (*4) |
| **General**           | Power  
100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz  
Neutrik’s powerCON type  
Power consumption  
About 8 Watts  
Dimensions  
8.3 (W) × 1.7 (H) × 10.2 (D) (*5) (210 (W) × 44 (H) × 260 (D) mm) (Excluding connectors and the like)  
Weight  
3.7 lbs. (1.7 kg)  
Temperature  
Operating: -32°F to 104°F  (0°C to +40°C)  
Storage: -4°F to +176°F  (-20°C to +80°C)  
Humidity  
Operating/Storage: 20% to 90%  (Non Condensing) |

---

*1 HDR is supported if the connected sink device supports HDR and its copied EDID is set for EDID setting.  
*2 The maximum cable distance varies depending on the connected devices and was measured under following conditions:  
- 1080p@60: When IDK’s 24 AWG cable was used and signals of 1080p@60 24 bit/pixel (8 bit/component) was output.  
- 4K@60: When IDK’s 18 Gbps supported cable was used and signals of 4K@60 24 bit/pixel (8 bit/component) was output.  
The maximum cable distance depends on the connected devices. The distance may not be extended with some device combinations, cabling method, or other manufacturer’s cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.  
*3 The maximum transmission distance is measured under the following conditions: Fiber that is polished by a recommended method is used; there is no interconnection; it does not exceed the allowable bending radius.  
*4 For digital systems, some problems, such as an HDCP authentication error, can often be recovered by physically disconnecting and reconnecting the digital cables. However, the Connection Reset feature will fix these problems automatically without the need to physically plug and unplug the cables. It creates the same condition as if the cable were physically disconnected and reconnected. This feature only works for the NJR-P’s output. If other devices are connected between the NJR-P’s output and sink device, this feature may be invalid.
11 Troubleshooting

In case the NJR-P does not work correctly, please check the following items first. Also refer to manuals for connected devices as well, since they may possibly be the cause of the problem.

- Are the NJR-P and all devices connected to power and powered on?
- Are signal cables connected correctly?
- Are there any loose or partially mated connections?
- Are the interconnecting cables specified correctly to support adequate bandwidth?
- For 4K format, is an 18 Gbps high-speed cable used?
- Are specifications of connected devices matched to each other?
- Are configuration settings for the connected devices correct?
- Is there any nearby equipment that may cause electrical noise/RF interference?

If additional assistance is required, please perform the following tests and then contact us.
